

Front-End Developer Assessment

Model Question Paper

HTML (5 × 4 = 20 Marks)

1. Create an HTML Student Admission Form containing:

- Student Name
- Student ID
- Email
- Date of Birth
- Gender (Radio Button)
- Skills (Checkboxes)
- Department (Dropdown)
- Address
- Submit Button
- Reset Button

2. Create an HTML table to display Employee Details. Columns: Employee ID, Employee Name, Department, Salary, Experience.

- Insert 6 employee records.
- Highlight employees whose salary is greater than ₹50,000 using inline CSS.

3. Create an HTML webpage containing:

- Heading: "Web Development Technologies"
- One paragraph about full-stack development
- Ordered list of 5 programming languages
- Unordered list of 5 frontend technologies

4. Design an HTML Product Profile Page displaying:

- Product Image
- Product Name
- Product Category
- Price
- Product Description
- Rating
- Clickable Product Website Link

5. Create an HTML webpage containing:

- One heading
- Three paragraphs
- One ordered list
- One table with 5 rows

- One image
- One hyperlink

CSS (5 × 4 = 20 Marks)

6. Design a CSS-styled Login Form containing:

- Username
- Email
- Password
- Remember Me Checkbox
- Login Button
- Apply background, padding, border, border-radius and box-shadow.

7. Create a Product Card using CSS.

- Product Image
- Product Name
- Price
- Description
- Rating
- Buy Now Button
- Apply hover effect to the button and card.

8. Create a Horizontal Navigation Bar using CSS.

- Home
- About
- Services
- Projects
- Contact
- Use Flexbox to align the menu items.

9. Design a Responsive Employee Card Gallery using CSS Grid.

- Display 8 employee cards.
- Each card should contain an image, name and designation.
- Automatically adjust according to screen size.
- Use a media query for mobile view.

10. Create a CSS animation where:

- A square moves from left to right continuously.
- Change its size during the animation.
- Use @keyframes.
- Apply the animation to a CSS class.

JavaScript (5 × 4 = 20 Marks)

11. Write a JavaScript program to find the second largest element in an array.
 - Input: [25, 67, 12, 89, 45, 90]
 - Output: 89
12. Write a JavaScript program to count the vowels in a given string.
 - Input: "JavaScript Programming"
 - Display the total number of vowels.
13. Write a JavaScript program to check whether a given number is a Palindrome.
 - Input: 121
 - Output: Palindrome
14. Create a JavaScript program to calculate Simple Interest and Total Amount.
 - Input: Principal Amount, Rate of Interest, Time
 - On button click, display Simple Interest and Total Amount.
15. Create a JavaScript program using an array of objects to store 5 student records.
 - Student Name, Roll Number, Department and Marks
 - Display only students who scored more than 75 marks.

React (5 × 4 = 20 Marks)

16. Create a React component to display Employee Details using Props.
 - Employee Name
 - Employee ID
 - Department
 - Designation
 - Salary
17. Create a React Counter Application using useState.
 - Increment button
 - Decrement button
 - Reset button
 - Display current count
18. Create a React Student List using an array and map().
 - Display Student Name, Roll Number, Department and Marks.
 - Display at least 5 students.
19. Create a React Simple Shopping Cart.
 - Display three products with Product Name, Price and Add to Cart Button.
 - On click, add the product to the cart.
 - Display number of products added and total price.

20. Create a React User Registration Form using useState.

- Name
- Email
- Password
- Course
- On Submit, display the entered user details on the screen.

MySQL (5 × 4 = 20 Marks)

Tables: Student(student_id, student_name, marks, course_id) and Course(course_id, course_name).

21. Display all students who scored more than 70 marks.
22. Display the student who has the highest marks.
23. Display the total number of students enrolled in each course using GROUP BY.
24. Display student name and course name using INNER JOIN.
25. Display all courses and their students using LEFT JOIN. Include courses even if no student is enrolled.
